

## Boiler Rental Checklist

**BOILER INSPECTIONS:** State laws require annual inspections and job site inspections. Cole specifies both. When getting pricing, be sure this is included and is not a hidden charge.

**\*PERMITS:** We provide an operating permit. We will provide the installation permit if applicable. State laws require an operating permit. Cole insures this is scheduled and performed. (Emissions permits, if required, are "By Others")

**ISOLATION VALVES:** We provide isolation/closure valves. If not included as standard equipment supplied with the boiler, one 8" steam header valve could cost an additional \$3,500 or more!

**VOLTAGE:** We wire to match job site specifications. Our equipment is pre-wired to match your specifications at not cost to you. If not included, this could cost an additional \$1,000 or more!

**STUB STACK:** We provide a standard, removable 4' stack with rain cap. If not included, this could cost an additional \$2,000 or more!

**GUARANTEE:** We cover defective parts and call-out service, 24 hours a day, 365 days a year. (Some companies only provide OEM warranty, meaning you ship to the factory and they will ship you a replacement. Can you afford the down time?)

**START UP:** All Cole Industrial rentals are started up by factory-trained and authorized service technicians.

A. Training - Included in our start up is training for your operators.

B. O & M's - All Cole Industrial rentals have complete O & M manuals including wiring diagrams.

C. Inspection Walk Through - We walk through with the boiler inspector.

D. Mobile Inventory - Our service trucks maintain an extensive inventory in the event a part needs to be replaced.

**CHECK-OUT / CHECK-IN:** Our base price includes our cost to check-out, including test firing, and check-in of equipment upon return.... no hidden fees or surcharges for this service.

**SAFETY VALVES:** We provide relief valves set to the job sites' specifications. If not supplied, costs to purchase or reset valves could run \$1,000 or more.

**EFFICIENCY:** We rent Cleaver-Brooks boilers, the most efficient made. Does a 2% efficiency make a difference? A 500hp boiler with a 100% firing rate, and 100% utilization at .75 cents per therm fuel means over \$27,000/yr. in fuel savings per year.

**\* LOCAL JURISDICTIONS CAN RED TAG AND SHUT DOWN YOUR SITE. IF YOUR SITE IS RED-TAGGED, THERE IS NO PRICE ESTIMATE WE CAN SUPPLY FOR LOSS OF PRODUCTIVITY.**

(SEE ACTUAL QUOTATION FOR EXACT SCOPE OF SUPPLY)
